8. HDR Monitoring

III. Operation Guide

9.3D-LUT Input Method

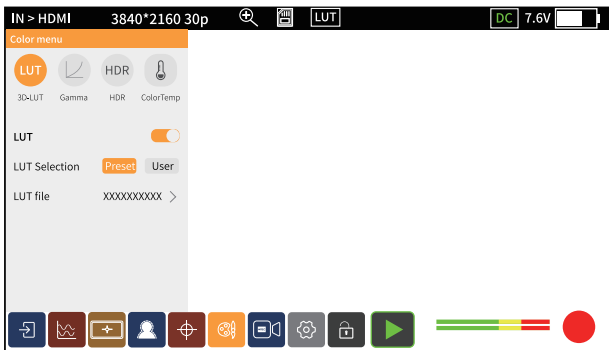

- 1 Place the LUT file in the LUT folder on the SD card and insert the SD card into the monitor
- 2 Click the Color Menu-3D-LUT, turn on , and then selecting Custom, click the Import button and wait for the system to retrieve the LUT file in the SD card that needs to be loaded
- 3 Click on the LUT file that needs to be loaded, then click Import and wait for the file to be imported into the system
- 4 Click the LUT file, enter the file selection, select the desired LUT, and click to confirm that the LUT is loaded successfully

Note: LUT file name only support English, do not allow any other languages , special characters, spaces, otherwise it will fail to be imported !

III. Operation Guide

10.3D-LUT Output Method

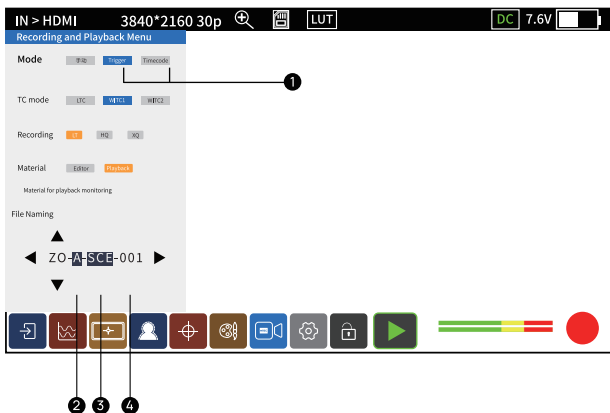

- 1 Click the color management-3D-LUT icon, open X select the corresponding LUT file, and the preset LUT color adjustment effect can be recorded into the file synchronously during recording.
- 2 The LUT for HDMI/SDI output is the same as the LUT that is turned on.

11.DCI-P3

III. Operation Guide

12. Recording Playback: Custom File Name

- 1 Trigger/TimeCode camera synchronization recording function
- 2 This position represents the camera position, click up and down to adjust
- 3 This position represents the shooting site, click up and down to adjust
- 4 This position represents the number of cameras, it is not adjustable and the digital number increases with the number of shootings

IV. Notes

1. Exceptions in Connection

- a. Zoom, Anamorphic, Waveform, these three functions can only be opened one at a time. Such as when the Anamorphic function is open, has opened the Zoom or Waveform will be forced to close.
- b. When HDMI IN, there is no SDI output. When SDI IN, both HDMI and SDI can be output.

2. SD Card Description :

SD Card Identification and Use Problems

- a. The SD card of this product does not support hot-swapping, if the SD card is inserted and removed during use, causing abnormalities such as the card cannot be recognized and the screen interface cannot be operated, please restart the device.
- b. The newly purchased SD card has to formatting by monitor's "SD Card Format" function before normal use.
- c. The recommended capacity of SD card is 32G-128G

3. Record and Playback

The Abnormal Phenomenon of Using Recording and Playback : Synchronous recording (Trigger/TimeCode)

- a. The camera needs to support HDMI Trigger/TimeCode
- b. Trigger/TimeCode function is turned on
- c. When recording video using 1080I60/50, the format of the recorded video will be converted to 1080P30/25.

V. Technical Parameters

| | |
|------------------------|---|
| Model No. | Memory 7 PRO |
| Screen Size | 7"TP |
| Screen Resolution | 1920*1080 |
| Aspect Ratio | 16:9 |
| Brightness | 2200nits |
| Color Gamut | DCI-P3 |
| Contrast Ratio | 1800: 1 |
| Viewing Angle | 170° (H/V) |
| Output Interface | HDMI output, SDI output, 3.5mm Headphone output |
| Input Interface | DC In , HDMI input, SDI input, SD Card Slot |
| Video Recording Format | MP4(SD card format exFAT) ^① |
| LUT Format | cube file (17*17*17 and 33*33*33) ^② |
| Audio Frequency | 48kHz |
| Power Supply Method | NP-F / DC IN |
| Input Voltage | DC7-16V |
| Power Consumption | < 10W |
| Firmware Updates | SD card updates |
| HDMI&SDI-Lut Output | support |
| Material | CNC aluminum alloy shell |
| Product Color | black |

V. Technical Parameters

| | |
|----------------------------|--|
| HDMI Input Signal Formats | 4096*2160P25/24/23.98 |
| | 3840*2160P30/23.98/25/24/23.98 |
